A goat. Magical rat with a hat. Sleepy sheep. The perfect ingredients for a game. Not guaranteed to be dolphin-free.. I am enjoying it, plus there's some grind in there for fans of boxes, but you don't have to.. Play it just to have something to play. No risks were taken, it's short, just kinda average overall. I can't really hate on it, so the least I can do is tell others to play it.. Winged Sakura: Mindy's Arc is one of those games where I really wish there were three options for reviews: Positive, Negative, and Wait for a Sale. It's a lane defense game where you have to collect recipes and parts to equip spirits to take on wave after wave in nearly 50 levels (plus endless mode). In order to get the gear you need, you need to either find it after winning a level, at which point it is usually underpowered. Or you need to find a Data Fragment, in which case you can buy it in the store. Or you need to find the recipe and hope you have or can buy the right parts. The setup is good, but the execution is weak. The main problem is the grind. There are items where you need to beat a 10 minute level in order to have at best a 25% chance of finding the item you need. I had a stretch of bad luck and it took more than four hours to finally get the recipe I needed, only to realize I didn't have any of the parts to craft it. I had to farm for another hour to get the Data Fragments to buy the parts in the store.

If you don't mind the grind, then it is worth picking up, but that is not an enthusiastic recommendation.. Just visually stunning with great music. The levels are pretty creative to allow a variety of ways to get over or past obstacles. Very colourful and cool platformer indeed.. This game works naturally on my Windows Tablet. This game supports mouse and keyboard but also supports to play on touch screen PC. I was surprised at it. Obviously, It is much more fun than other room escape games.

Error&Disadvantages :
I think I have cleared my achievements now. And It is not applied. But maybe this is my wifi problem.
I played a mode with no ghosts, but I was shocked because the ghost appeared on the car..
https://www.youtube.com/watch?v=dtldgZ7JJvo describes how I feel about this game. I would've paid $50.. I really want people to play this game! It's a cute idea that seems like a blast to play with friends. However, the game needs more people playing it. If you're on the fence about buying it, here is what you should know:

Pros:
-Cheap! Game is a steal honestly. Its not at its peak value yet because of the small playerbase, but it's a tiny investment.
-Simple concept. Gets the job done with streamlined gameplay that really gets to the core of class based "shooter." Doesn't really fit that title much, but its more akin to TF2 than other games.
-Quick rounds! Doesn't take long to play honestly which is great! Haven't played with people yet but should be a blast with friends!

Cons:
-Game simply doesn't look all that nice. This helps gameplay by simplifying interactions with very little clutter and helps keep the game running smoothly on any machine, but be warned, it doesn't look any better playing than the screenshots do.
-Poorly optimized. Even though it plays well on any machine, the game is more sluggish than a well optimized AAA game or even most indie games. Early access does mean some of this is expected.
-No players. This might bug potential buyers more than it should because the AI isn't exactly great, but buying this game helps in this regard!

Add me if you want to play, this game is cute and cheap and frankly I think its a good example of what an amateur early access title should look like.

If you kno da wae, you will play this game.

This is a good combination of pack racing, rally-X, rally raid, stadium events, snow, sand, forest, etc. multi-style arcade-ish racing without being ridiculously over the top. Easy to play with a controller, decent difficulty compared with most Milestone games, looks great at certain times of day, runs well. Fun to have Trois-Rivières in there, even though the GP circuit is not included.

The engine notes are weak, there is a lack of liveries and the AI can get a bit wonky at times, but it's a lot of fun overall. I had to turn off the announcer because he sounds like a bored ♥♥♥♥♥♥♥♥ spaz.. Good game; albiet a bit to slow moving.. Stanley is a thicc n.i.g.g.a. Pros:
->Really great graphics
->Effects
->Interesting levels
->Not bad gameplay
->Calm and relaxing soundtrack :3

Cons:
->Some bugs
->Annoying soundtrack

6/10. Great game! Really fun, well done! Go for it!. Got a free copy of the game from orlygift.com. An interesting Puzzel Game is what I read a couple times on it.

In fact, it is interesting. But to me there is just too many polints against it I just can't let go.

First of is the strategy; once you figure out the "puzzel" in how to play the game well, it largely devolves into doing one key strategy to gain profits and resources to further expand and conquer better than the AI. That's only half the puzzel - the other half is figuring out its somewhat complicated card mini-game it substitutes for combat phases. It does have some itneresting promise, but its back into the solution formula - once you figure it out, that is what you do.

4x (or maybe 3x here? no real exploration in this one) style games often hail to high standards on having options on how to do things. This game has a very rigid set of how to play. It is interesting, it does have promise - but to me, its just not in the right category.

That is what irks me the most. Its not very flexible on its approach, its a one-off goal to expand and exploit with an over-arching goal to exterminate (or win by other means before your own demise) and that to me is a bit misleading still. There really is only one or two good ways to solve this puzzel game, and very little deviation to it.

It just feels shallow I guess, I was expecting more - or perhaps a bit more leeway on how to get around the annoying card combat. That's almost another game entirely and needs quite a bit to figure out on its own.
